PART A

Section Id : 128206315
Section Number : 1
Section type : Online
Mandatory or Optional: Mandatory
Number of Questions: 30
Number of Questions to be attempted: 30
Section Marks: 30
Display Number Panel: Yes
Group All Questions: No

Sub-Section Number: 1
Sub-Section Id: 128206510
Question Shuffling Allowed : Yes

Question Number : 1 Question Id : 12820611016 Question Type : MCQ Option Shuffling : No Display Question Number : Yes
Single Line Question Option : No Option Orientation : Vertical
Correct Marks : 1 Wrong Marks : 0

Which of the following is true about the linear velocity of Earth around the sun? (For northern hemisphere).

- (a) Larger in summer, smaller in winter
- (b) Larger in winter, smaller in summer
- (c) Equal across the whole year
- (d) Equal across the whole year, except in winter and summer solstices

Options :

12820643527. A

12820643528. B

12820643529. C

12820643530. D

Question Number : 2 Question Id : 12820611017 Question Type : MCQ Option Shuffling : No Display Question Number : Yes
Single Line Question Option : No Option Orientation : Vertical

Correct Marks : 1 Wrong Marks : 0

Match the following:

Measurements

- (A) Lifetime of the proton
- (B) Age of the Universe
- (C) Time for sound to travel 0.35 m
- (D) Time for light to travel 0.3 m

Time intervals (in seconds)

- (i) 1×10^{-3}
- (ii) 3×10^{40}
- (iii) 1×10^{-9}
- (iv) 5×10^{17}

- (a) (A)-(iii), (B)-(i), (C)-(iv), (D)-(ii)
- (b) (A)-(i), (B)-(iii), (C)-(ii), (D)-(iv)
- (c) (A)-(ii), (B)-(iv), (C)-(i), (D)-(iii)
- (d) (A)-(iv), (B)-(ii), (C)-(iii), (D)-(i)

Options :

12820643531. A

12820643532. B

12820643533. C

12820643534. D

Correct Marks : 1 Wrong Marks : 0

A pumpkin (1 kg) and a watermelon (2 kg) are lying on the floor. Considering the position of pumpkin as the origin of a coordinate system, watermelon lies at a point (2.0, 1.0) m. At $t=0$, two forces $\vec{F}_p = (3.0\hat{i} + 4.0\hat{j})$ and $\vec{F}_w = (-4.0\hat{i} - 3.0\hat{j})$ start acting on pumpkin and watermelon respectively. With respect to the position at $t = 0$ s, what is the displacement of the centre of the mass of pumpkin-watermelon system at time $t = 3.0$ s (in unit-vector notation).

- (a) $(1.5 \text{ m})\hat{i} - (1.5 \text{ m})\hat{j}$
- (b) $(-3.0 \text{ m})\hat{i} + (3.0 \text{ m})\hat{j}$
- (c) $(3.0 \text{ m})\hat{i} - (3.0 \text{ m})\hat{j}$
- (d) $(-1.5 \text{ m})\hat{i} + (1.5 \text{ m})\hat{j}$

Options :

- 12820643535. A
- 12820643536. B
- 12820643537. C
- 12820643538. D

Question Number : 4 Question Id : 12820611019 Question Type : MCQ Option Shuffling : No Display Question Number : Yes Single Line Question Option : No Option Orientation : Vertical

Correct Marks : 1 Wrong Marks : 0

A magnetic field around the chest (that is generated due to small currents in the heart) of a person is measured to be $4 \mu\text{ Gauss}$. Assuming the entire current is generated due to a long straight wire inside the heart and the surface of the chest to be at a distance of 4 cm from that hypothetical wire, calculate the heart current.

$$[\mu_0 = 4\pi \times 10^{-7} \text{ T.m/A}, \quad 1 \text{ Gauss} = 10^{-4} \text{ T}]$$

- (a) $80 \mu\text{A}$
- (b) $40 \mu\text{A}$
- (c) $125.6 \mu\text{A}$
- (d) $62.8 \mu\text{A}$

Options :

- 12820643539. A
- 12820643540. B
- 12820643541. C
- 12820643542. D

Correct Marks : 1 Wrong Marks : 0

Considering the fact that the eardrum membrane has to vibrate with the same frequency as of the incident sound wave, if the highest pitch a human can hear is of $50 \mu\text{s}$, what will be the corresponding angular frequency of the vibrating eardrum?

- (a) 1.26×10^5 radian/s
- (b) 2.52×10^5 radian/s
- (c) 3.96×10^5 radian/s
- (d) 1.97×10^5 radian/s

Options :

- 12820643543. A
- 12820643544. B
- 12820643545. C
- 12820643546. D

The DNA fragment with a sequence to be amplified is shown below. Assuming that the primer attaches exactly to the end of the fragment, which of the following is most likely the primer? (Note: The N stands for any nucleotide.)

5'-ATGNNNN NNN NNNGCT-3'

- (a) 5'-GCT-3'
- (b) 5'-TAC-3'
- (c) 5'-TCG-3'
- (d) 5'-AGC-3'

Options :

- 12820643799. A
- 12820643800. B
- 12820643801. C
- 12820643802. D

Match the items in column I with column II and choose the correct option from the codes given below:

	Column I	Column II
A.	Neuron	i. Antibodies
B.	Bone matrix	ii. Nissl bodies
C.	RBC of man	iii. Ossein
D.	Lymphocytes	iv. Non-nucleated

	A	B	C	D
(a)	IV	I	II	III
(b)	III	II	I	IV
(c)	II	III	IV	I
(d)	I	III	IV	II

Options :

12820643951. A

12820643952. B

The viscosity of a dilute aqueous solution of a polymer was determined to be 1.8 cp at 25 °C using an Ostwald's viscometer. If the time required for the flow of water from designated one point to another in the viscometer was 100 seconds, the time required for the flow of the aqueous polymer solution between the same points would be :

(Viscosity of water at 25°C = 0.9 cp and the density of aqueous polymer solution = 1.1 g cm⁻³)

- (a) 150 seconds
- (b) 180 seconds
- (c) 200 seconds
- (d) 220 seconds

In the Friedel-Crafts alkylation reaction, it is generally observed that rearrangement (shift of hydride or alkyl group) is a side reaction. To prepare alkyl substituted aromatic compounds using Friedel-Crafts alkylation reaction, it is a better practice to avoid the rearrangement

- (a) Use acylation and then carryout reduction of carbonyl group
- (b) Run the reaction at lower temperature
- (c) Run the reaction at lower concentration of alkyl halide
- (d) Run the reaction with lower concentration of Lewis acid

Options :

- 12820644027. A
- 12820644028. B
- 12820644029. C
