Question Numbers : (6 to 9)

Question Label : Comprehension

India is not, as you imagine, a distant, strange, or at the very outset, a curious country. India for the future belongs to Europe, it has its place in the Indo-European World, it has its place in our own history, the history of the human mind.

You know how some of the best talents and noblest genius of our age has been devoted to the study of the development of the outward or material world, the growth of the earth, the first appearance of the living cells, their combination and differentiation leading up to the beginning of organic life, and its steady progress from the lowest to the highest stages. Is there not inward intellectual world also which has to be studied in its historical development, from the first appearance of predicative and demonstrative roots, their combination and differentiation, leading up to the beginning of rational thought in its steady progress from the lowest to the highest stages? And in that study of the history of the human mind, in that study of ourselves, of our true selves, India occupies a place second to no other country. Whatever sphere of the human mind you may select for your special study, whether it be language, or religion, or mythology, or philosophy, whether it be laws or customs, primitive art or primitive science, everywhere you have to go to India, whether you like it or not, because some of the most valuable and most instructive materials in the history of man are treasured up in India.

The English word 'brother' has two plural forms, *brothers* and the archaic *brethren*. Why these words have different meanings in English?

- a. English is a funny language
- b. English dominates all other languages of the world
- c. This is in accordance with the tendency in natural languages that difference in form implies a difference in meaning
- d. Brother becomes brothers and brethren in different historical period of time because the Church wanted to use the term 'brethren' for brotherhood
