#### Case Study - 42 to 46 (Question Id - 91)

"What, then, is good ? How is good to be defined ? Now it may be thought that this is a verbal question. A definition does indeed often mean the expressing of one word's meaning in other words. But this is not the sort of definition I am asking for. Such a definition can never be of ultimate importance to any study except lexicography. If I wanted that kind of definition I should have to consider in the first place how people generally used the word good; but my business is not with its proper usage, as established by custom. I should, indeed, be foolish if I tried to use it for something which it did not usually denote : if, for instance, I were to announce that, whenever I used the word good, I must be understood to be thinking of that object which is usually denoted by the word table. I shall, therefore, use the word in the sense in which I think it is ordinarily used; but at the same time I

am not anxious to discuss whether I am right in thinking it is so used. My business is solely with that object or idea, which I hold, rightly or wrongly, that the word is generally used to stand for. What I want to discover is the nature of that object or idea, and about this I am extremely anxious to arrive at an agreement.

But if we understand the question in this sense, my answer to it may seem a very disappointing one. If I am asked, What is good ? my answer is that good is good, and that is the end of the matter. Or if I am asked How is good to be defined ? my answer is that it cannot be defined, and that is all I have to say about it. But disappointing as these answers may appear, they are of the very last importance. To readers who are familiar with philosophic terminology, I can express their importance by saying that they amount to this : That propositions about the good are all of them synthetic and never analytic; and that is plainly no trivial matter. And the same thing may be expressed more popularly, by saying that, if I am right, then nobody can foist upon us such an axiom as that Pleasure is the only good or that The good is the desired on the pretence that this is the very meaning of the word". (G.E. Moore, Principia Ethica, 1903)

Case Study - 71 to 75 (Question Id - 97)

"Analytic judgments say nothing in the predicate except what was actually thought already in the

concept of the subject, though not so clearly nor with the same consciousness. If I say : All bodies are extended, then I have not in the least amplified my concept of body, but have merely resolved it, since extension, although not explicitly said of the former concept prior to the judgment, nevertheless was actually thought of it; the judgment is therefore analytic. By contrast, the proposition : Some bodies are heavy, contains something in the predicate that is not actually thought in the general concept of body; it therefore augments my cognition, [4 : 267] since it adds something to my concept, and must therefore be called a synthetic judgment".
