Read the following passage and answer the question given below by choosing the most appropriate option.

Previous investigations into the workings of memory usually tested episodic memory, which describes the recall of specific events, as well as the ability to remember names and the whereabouts of items like car keys. This ability usually remains intact until the mid-sixties, when people often become forgetful of things like recent events and minor details. While some researchers suggest that this well-known decline in episodic memory in the elderly stems from degeneration of the frontal lobes of the brain, many scientists believe that such memory loss is largely due to retirement: after the demands of work stop, most people no longer exercise their mental faculties as strenuously. Thus, regular mental exercise might curtail memory loss.

Question.

What is the primary purpose of the passage?

- 1) to discuss the ways in which a new theory of memory challenges common assumptions
- 2) to explain why past investigations into memory tested only episodic memory.
- 3) to describe recent research into the functioning of the brain.
- 4) to consider the reasons why episodic memory diminished in later years.

Objective Question

55	55	Read the following passage and answer the question given below by choosing the most appropriate option. Previous investigations into the workings of memory usually tested episodic memory, which describes the recall of specific events, as well as the ability to remember names and the whereabouts of items like car keys. This ability usually remains intact until the mid-sixties, when people often become forgetful of things like recent events and minor details.
