अम्लीय वर्षा में मुख्यतः पाया जाता है - [Question ID = 353]

1. Sodium chloride/सोडियम क्लोराइड [Option ID = 1409]
2. Sulphur dioxide and nitrogen dioxide/सल्फर डाइऑक्साइड और नाइट्रोजन डाइऑक्साइड [Option ID = 1410]
3. Hydrochloric acid/हाइड्रोक्लोरिक अम्ल [Option ID = 1411]
4. Carbon tetra chloride/कार्बन टेट्राक्लोराइड [Option ID = 1412]

4) A bus travels 54 Km. in 90 minutes. What is the speed of the bus ?

एक बस 90 मिनट में 54 किलोमीटर जाती है, बस की चाल बताइए ? [Question ID = 354]

1. 0.6 m/s [Option ID = 1413]
2. 10 m/s [Option ID = 1414]
3. 5.4 m/s [Option ID = 1415]
4. 3.6 m/s [Option ID = 1416]

5) Variety of organisms exists on earth. What are their inter-relationships and their relationship with the environment called?

पृथ्वी पर बहुत तरह के पेड़ पौधे और जीव जंतु पाए जाते हैं, उनकी आपस के संबंध तथा उनके वातावरण के साथ संबंध को क्या कहते हैं ? [Question ID = 355]

1. Diversity/विविधता [Option ID = 1417]
2. Biosphere/बायोस्फीयर [Option ID = 1418]
3. Biology/जीव विज्ञान [Option ID = 1419]
4. Biodiversity/जैव विविधता [Option ID = 1420]

6) What is force acting on per unit area called?

प्रति इकाई क्षेत्रफल पर लगे हुए बल को क्या कहते हैं ? [Question ID = 356]

1. Non- contact forces/असंपर्क बल [Option ID = 1421]
2. Friction/घर्षण बल [Option ID = 1422]
3. Contact forces/संपर्क बल [Option ID = 1423]
4. Pressure/दबाव [Option ID = 1424]

7) Sodium Carbonate is a basic salt because it is salt of a -

सोडियम कार्बोनेट एक क्षारीय लवण है क्योंकि यह एक लवण है - [Question ID = 357]

1. strong acid and strong base/सांद्र अम्ल और सांद्र क्षार का [Option ID = 1425]
2. weak acid and weak base/तनु अम्ल और तनु क्षार का [Option ID = 1426]
3. strong acid and weak base/सांद्र अम्ल और तनु क्षार का [Option ID = 1427]

1) Read the passage carefully and answer the following question.

The Road to success is not straight; there is a curve called failure, a loop called confusion, speed bumps called friends, caution lights called family, and you will have flats called jobs. But, if you have a spare called determination, an engine called perseverance, insurance called faith, and a driver called God, you will make it to a place called success!

In spite of all our planning and preparation, unexpected challenges are certain to arise. The bumps in the road are unavoidable, but you'll never get to your destination if you aren't willing to drive over them. The difference between a disaster and triumph lies in whether or not you're prepared and willing to weather the storm. If you're ready, those bumps will become stepping- stones.

The key thing to realize is that working harder is same as working smarter. How do you work smarter? You just need to have the right skills. People want improved circumstances and better life without an improved self. They want victory without paying the price or making efforts. It really cannot happen without the other. Any improvements that have not been generated by improving yourself are superficial and short-lived. If you want to have a better future, you have to change yourself. Stop worrying about the various challenges that will come your way. Just believe in yourself and use them as stepping-stones.

“Success” is getting whatever you want out of life without violating the rights of others. It is not an accident. Success is the result of our attitude and our attitude is a choice. Hence success is a matter of choice and not chance.

Today success represents a holistic and positive attitude to life. Attitude is everything. Success is not restricted within some kind of brick-and-mortar premises. It assumes the individuality of a complete act executed with perfection; material achievements do not define life. We don't remember sports stars for the products they endorse but the spirit of achievement they represent. In the abundance of positive attitude underline the grandeur of a truly rewarding rich life.

Success can be measured from two standpoints—the external and the internal. Externally, it is the measure of a job well done and recognition. Internally it is the feeling of achievement and wholeness derived from the completion of a task or fulfilment of desire.

As a part of the Nanda Devi glacier broke off in Uttarakhand's Chamoli district on Sunday, leading to massive floods, a study published in 2019 had warned that Himalayan glaciers have been melting twice as fast since the start of this century due to climate change. The glacier collapse or avalanche at Joshimath on Sunday led to a massive flood in the Dhauli Ganga river and caused large-scale devastation in the upper reaches of the ecologically fragile Himalayas.

The glaciers may have lost as much as a quarter of their enormous mass over the last four decades. The study synthesised the data from across the region, stretching from early satellite observations to the present. The data indicates that the melting is consistent in time and space, and that rising temperatures are to blame, the researchers said. Temperatures vary from place to place, but from 2000 to 2016 they have averaged one degree Celsius higher than those from 1975 to 2000, they said. Researchers analysed repeat satellite images of some 650 glaciers spanning 2,000 kilometres from west to east. Many of the 20th-century observations came from declassified photographic images taken by the U.S. spy satellites. They created an automated system to turn these into three dimensional (3D) models that could show the changing elevations of glaciers over time.

The researchers then compared these images with post-2000 optical data from more sophisticated satellites, which more directly convey elevation changes. They found that from 1975 to 2000, glaciers across the region lost an average of about 0.25 metres of ice each year in the face of slight warming. Following a more pronounced warming trend starting in 2000 the loss accelerated to about half a metre annually.

Researchers noted that Asian nations are burning ever-greater loads of fossil fuels and biomass, sending soot into the sky, and much of it eventually lands on snowy glacier surfaces, where it absorbs solar energy and hastens melting.
