The theoretical framework for critical social research lies within the critical theory of society developed by thinkers associated with the Frankfurt School of Social Research such as Habermas, Horkheimer, Adorno and Fromm. These thinkers attacked the dominant ideas that were associated with positivism, most significantly the idea of value neutrality, and brought concepts such as power into the process of social scientific enquiry. The Frankfurt School was chiefly concerned with issues relating to social class, based their analysis on a Marxist view of society. As such, they attacked what they perceived to be the inherent class bias of orthodox social enquiry which, they argued, benefited the ruling capitalist class. Critical social research is often associated with conflict theory, feminist researchers, and radical psychotherapy, and has been adopted by a variety of political organisations and social movements. Critical social researchers who draw their inspiration from the Frankfurt School argue that it is the responsibility of social researchers to generate knowledge that aims to challenge and transform unequal, power relationships. For these researchers, the purpose of social research is to ask critical questions with a view to changing society for the better.
