## India' growth can't be built on Chinese efficiency: Jaishankar

**New Delhi:** Indian growth cannot be built on Chinese efficiency, external affairs minister S. Jaishankar said on Wednesday, and backed building robust domestic vendor chains for the manufacturing sector.

"I think we should stop looking for a China fix. If we are really to sustain and take the economy to a different level we have to create a kind of domestic vendor chain that a serious manufacturing economy will do," Jaishankar said at the launch of the book 'Made in India: 75 Years of Business and Enterprise' authored by India's G20 Sherpa Amitabh Kant. The production-linked incentive scheme (PLI) is an effort to raise manufacturing capabilities in the country, he said.

The external affairs minister said India needs to get its focus back on manufacturing to take advantage in the post-pandemic world. "There is no major country in the world which has sustained or enhanced its global position without some commensurate build up of manufacturing. I have always believed that this focus on services was actually an elegant excuse for being incompetent in manufacturing" said Jaishankar.

The ministers said the country will have to think through its growth strategy and domestic solutions against the backdrop of the global challenges and cited the Covid experience and the strategy adopted to deal with it.

"In the name of opening the economy and globalising we should not end up de-industrialising this country. We should not allow level playing field in this country for others to subsidise their rich. That's economic suicide. We need to be clear that every country must support its manufacturers, must support its businesses. We mustn't allow other businesses enjoy advantages in our country at the expense of others," said Jaishankar.

He also said there is a need to look at the economy from a strategic lens and identify the right partners. "I see 'Make in India' not as a manufacturing programme. I see it as a strategic statement," he added.

Given below are two statements: one is labelled as **Assertion A** and the other is labelled as **Reason R**

**Assertion A:** Food in a heated vacuum chamber will lose moisture at a lower temperature or at a faster rate than it would in a chamber at atmospheric pressure.

**Reason R:** At constant temperature, a decrease in pressure results in an increase in the rate of boiling.

In the light of the above statements, choose the **correct answer** from the options given below.

1. Both **A** and **R** are true and **R** is the correct explanation of **A**
2. Both **A** and **R** are true but **R** is **NOT** the correct explanation of **A**
