Read the passage given below and answer the questions that follow:

The pale-faced man peered down the microscope. He was evidently not accustomed to that kind of thing, and held a limp white hand over his disengaged eye. "I see very little", he said. "Touch this screw", said the bacteriologist; "perhaps the microscope is out of focus for you". "Ah! Now I see" said the visitor. "Not so very much to see after all. And yet those little particles, those mere atomies, might multiply and devastate a city!" "Those have been stained and killed", said the bacteriologist. "I wish for my own part, we could stain and kill every one of them in the universe". "I suppose", the pale man said with slight smile, "that you scarcely care to have such things about you in the living – in the active state?" "On the contrary, we are obliged to", said the bacteriologist. "Here is the living thing. This is a cultivation of the actual living disease bacteria." "Bottled cholera, so to speak." A slight gleam of satisfaction appeared momentarily on the face of the pale man. The bacteriologist watched the morbid pleasure in his visitor's expression. "These anarchist – rascals," said the visitor, "are fools, blind fools - to use bombs when this kind of thing is attainable, I think –".

At this moment the bacteriologist's wife called him into the hall for a quick word. When he returned the visitor was ready to leave. The bacteriologist accompanied him to the door, and then returned to his laboratory. "Blue ruin!" cried the bacteriologist, and incontinently ran to the front door and down the steps of his house to the street. As he saw the visitor's cab leaving, he hired another cab to give chase. The scientist's wife, horrified by his inappropriate dress and hurry, followed in a third cab, with her husband's shoes and coat and hat. The man in the foremost cab crouched in the corner, holding the tube that contained vast possibilities of destruction. His mood was a mixture of fear and exultation. Chiefly he was afraid of being caught before he could accomplish his purpose. But his exultation for exceeded his fear. No anarchist before him had even approached this conception of his. He had only to make sure of the water supply and break the little tube into a reservoir. How brilliantly he had planned it forged the letter of introduction, got into the laboratory, and had seized his opportunity! The world should hear of him at last. All those people who had sneered at him, neglected him, preferred other people to him, found his company undesirable, should consider him at last. In the speeding cab, however he accidentally broke the glass vial and decided to become a human vector. He swallowed what was left in the vial, and stopped the cab, realizing that he no longer needed to flee. When the scientist caught up and confronted him, the anarchist announced what he had done. The scientist allowed him to walk away and told his wife that the man had ingested the stolen bacteria. However, he had not taken cholera bacteria but a strange new microbe which he had been studying, the only known effect of which was to make the skin of animals exposed to it turn bright blue.
