Assertion (A) : As per Robinson (2014), the sample size requirement for qualitative research depends heavily on two factors: (i) redundancy and saturation level of each method; and (ii) variation in the population.

Reason (R) : As qualitative studies are intended to provide an in-depth and holistic view of the population through the eyes of fewer cases, it is necessary to identify the population variability prior to the sample selection.

In light of the above statements, choose the **correct** answer from the options given below.

- 1. Both (A) and (R) are true and (R) is the correct explanation of (A).
