Unquestionably a literary life is for the most part an unhappy life; because, if you have genius, you must suffer the penalty of genius; and if you have only talent, there are so many cares and worries incidental to the circumstances of men of letters, as to make life exceedingly miserable. Besides the pangs of composition, and the continuous disappointment which a trues artist feels at his inability to reveal himself, there is the ever-recurring difficulty of gaining the public ear. Young writers are buoyed up by the hope and the belief that they have only to print to be acknowledged at once as a new light in literature. You can never convince a young author that the editors of magazines and the publishers of books are a practical body of men, who are by no means frantically anxious about placing the best literature before the public. Nay, that for the most part they are mere brokers, who conduct their business on the hardest lines of a Profit and Loss account. But supposing your book fairly launches, its perils, are only beginning. You have to run the gauntlet of the critics. To a young author, again, this seems to be as terrible on ordeal as passing down the files of Sioux or Comanche Indians, each one of whom is thirsting for your scalp. When you are a little older, you will find that criticism is not much more serious than the bye-play of clowns in a circus, when they beat around the ring the victim with bladders slung at the end of long poles. A time comes in the life of every author when he regards critics as comical rather than formidable, and goes his way unheeding. But there are sensitive souls that yield under the chastisement and, perhaps after suffering much silent torture, abandon the profession of the pen for ever, Keats, perhaps, is the saddest example of a fine spirit hounded to death by savage criticism; because, whatever his biographers may aver, that furious attack of Gifford and Terry undoubtedly expediated his death. But no doubt there are hundreds who suffer keenly hostile and unscrupulous criticism, and who have to bear that suffering in silence, because it is a cardinal principle in literature that the most unwise thing in the world for an author is to take public notice of criticism in the way of defending himself. Silence is the only safeguard, as it is the only dignified protest against insult and offence.

Why is the literary life mostly an unhappy one?

1. Most people don't understand literary people
2. They have to suffer the penalty of genius
3. Literary life is not about richness
4. They do not get the publishers easily

Organisms change over time. Some of these changes make no difference to the success or failure of the organism that inherit them; other changes do. Take a group of antelopes in which one individual has longer legs than its siblings. Those longer legs make the individual better at escaping from predators, hence giving it an advantage in the survival stakes. Its descendants inherit this feature and are better able to survive as a consequence. Those longer legs have thus become an 'adaptation' Their evolution means that this particular lineage of ante lopes has adapted to its conditions, thanks to its development of this features. Their evolution means that this particular lineage of ante lopes

Over the generations, the individual components of the genetic code within a species change, or mutate. So far as we know, mutations mny provide no evolutionary advantage at all. They may be disadvantageous, in which case they are weeded out via natural selection; or they may be advantageous, in which case they persist through the generations.

Choose the most appropriate meaning of the given word:

### MUTATION

1. undergo a change in the genetic code

Supposing you have to make a payment of Rs.100, you can do so in rupees-coins; but it would be cumbersome to pay in nickel or copper coins, because they are heavy to carry and also because it takes much time to count them. The government therefore permits you to make the payment in rupee-notes. What are these rupee notes really? They are kind of money, right enough, although they are made of paper instead of metal. You can use them in just the same way that you use ordinary money. The reason why they are made of paper and used is that they save the trouble of carrying metal coins about-of course, paper is lighter than metal-and they also save using silver and other metals when they are scarce.

What makes these mere pieces of of paper bear the value of the number of rupees that is printed upon them? Why should a piece of paper, with "100" printed on it be worth twenty times as much as a piece of paper with "five" printed on it-and also worth a hundred times as much as a silver rupee-coin? The reason is that Government guarantees that the piece of paper is worth the amount printed an it and promised to pay that amount to any body who wishes to exchange this paper for the rupee-coins. Also, if you think about it you can easily realize that crores and crores more of rupee-coins would have to be minted, if all paper-money were abolished.

Perhaps you may ask, "Then why not have paper money only?" Why use silver and Nickle and copper at all? The answer is-because money must, as we have already said, be something so useful that everyone wants. Also because the metals are the best form of money; and thirdly because it would be impossible to print just the right amount of paper money that would keep prices at their proper natural level. It any Government prints too much paper money, then prices go up at once. The supply of money is increased and therefore its value (in food, clothes, books, houses, land, tools and everything else) goes down.

You may think at first that it is queer to talk of having too much paper money and the money is so nice and useful that you cannot have too much of it. But if you think that, I an afraid you are forgetting that money is only useful for what it will buy; so it is no good at all having more money if there are no more things to buy with it. The more money there is , the higher will be the prices of everything. The same thing happens with rupee-coins as with paper money. But it is not likely to happen, for this reason: it is very easy to print a great deal of paper money, but not at all easy to increase the amount there is if it keeps very steady and changes very little. In fact that is one of the chief reasons why it was chosen to make coins of.

Supposing you have to make a payment of Rs.100, you can do so in rupees-coins; but it would be cumbersome to pay in nickel or copper coins, because they are heavy to carry and also because it takes much time to count them. The government therefore permits you to make the payment in rupee-notes. What are these rupee notes really? They are kind of money, right enough, although they are made of paper instead of metal. You can use them in just the same way that you use ordinary money. The reason why they are made of paper and used is that they save the trouble of carrying metal coins about-of course, paper is lighter than metal-and they also save using silver and other metals when they are scarce.

What makes these mere pieces of of paper bear the value of the number of rupees that is printed upon them? Why should a piece of paper, with "100" printed on it be worth twenty times as much as a piece of paper with "five" printed on it-and also worth a hundred times as much as a silver rupee-coin? The reason is that Government guarantees that the piece of paper is worth the amount printed an it and promised to pay that amount to any body who wishes to exchange this paper for the rupee-coins. Also, if you think about it you can easily realize that crores and crores more of rupee-coins would have to be minted, if all paper-money were abolished.

Perhaps you may ask, "Then why not have paper money only?" Why use silver and Nickle and copper at all? The answer is-because money must, as we have already said, be something so useful that everyone wants. Also because the metals are the best form of money; and thirdly because it would be impossible to print just the right amount of paper money that would keep prices at their proper natural level. If any Government prints too much paper money, then prices go up at once. The supply of money is increased and therefore its value (in food, clothes, books, houses, land, tools and everything else) goes down.

You may think at first that it is queer to talk of having too much paper money and the money is so nice and useful that you cannot have too much of it. But if you think that, I an afraid you are forgetting that money is only useful for what it will buy; so it is no good at all having more money if there are no more things to buy with it. The more money there is , the higher will be the prices of everything. The same thing happens with rupee-coins as with paper money. But it is not likely to happen, for this reason: it is very easy to print a great deal of paper money, but not at all easy to increase the amount there is if it keeps very steady and changes very little. In fact that is one of the chief reasons why it was chosen to make coins of.

Read the passage and answer 5 questions that follow:

High technology, or simply high-tech, is the latest generation of manufacturing activities. It is best understood as the application of intensive research and development (R and D) efforts leading to the manufacture of products of an advanced scientific and engineering character. Professional (white collar) workers make up a large share of the total workforce. These highly skilled specialists greatly outnumber the actual production (blue collar) workers. Robotics on the assembly line, computer-aided design (CAD) and manufacturing, electronic controls of smelting and refining processes, and the constant development of new chemical and pharmaceutical products are notable examples of a high-tech industry.

Neatly spaced, low, modern, dispersed, office-plant-lab buildings rather than massive assembly structures, factories and storage areas mark the-tech industrial landscape. Planned business parks for high-tech start-ups have become part of regional and local development schemes.

High-tech industries which are regionally concentrated, self-sustained and highly specialised are called technopolies. The Silicon Valley near San Francisco and Silicon Forest near Seattle are examples of technopolies.

Manufacturing contributes significantly to the world economy. Iron and steel, textiles, automobiles, petrochemicals and electronics are some of the world's most important manufacturing industries.

Which one of the following is not true about High-Tech industry?

Read the passage and answer 5 questions that follow:

Watershed management basically refers to efficient management and conservation of surface and groundwater resources. It involves prevention of runoff and shortage and recharge of groundwater through various methods like percolation tanks. Recharge wells. Etc. however. In broad sense watershed management includes conservation. Regeneration and judicious use of all resources- natural (like land water plants and animals) and human with in a watershed. Watershed management aims at bringing about balance between natural resources on the one hand and society on the other. The success of watershed development largely depends upon community participation.

The Central and State Government have initiated many watershed development and management programmes in the country. some of these are being implemented by non-government organisations also. Haryali is a watershed development project sponsored by the Central Government which aims at enabling the rural populations to conserve water for drinking, irrigation, fisheries and afforestation. The Project is being executed by Gram Panchayats with people's participation. Neeru-Meeru (water and you) programme (in Andhra Pradesh) and Arvary Pani Sansad (in Alwar Rajasthan) have taken up constructions of various water-harvesting structures such as percolation tanks. Dug out ponds (Johand). Check dams. etc... through people's participation. Tamil Nadu has made water harvesting structures in the houses compulsory. No building can be constructed without making structures for water harvesting.

watershed development projects in some areas have been successful in rejuvenating environment and economy. However. There are only a few success stories. In majority of cases. The programme is still in its nascent stage. There is a need to generate awareness regarding benefits of watershed development and management among people in the country, and through this integrated water resource management approach water availability can be ensured on sustainable basis.

What is watershed?

1. It is efficient management and conservation of surface and groundwater resources.
2. It is a system of equitable distribution of water in an area.
3. It is a method of storing the canal water.
4. It is harvesting of natural streams.

He wrote quite a few poems in Brajbuli like vaishnava lyrics in the pen name Bhanusingha which are a collection under the name of "Bhanusingher Padavali". These lyrics serve as a perfect accompaniment to Manipuri dances and often Bhanusingher Padavalis are performed as a dance drama in Manipuri dance style today.

There is a great importance of laya in Indian Talas. Laya has been categorised basically into three types - Vilambit, Madhya and Druta. The rule of application in various forms of laya is called 'Yati'. Yati denotes application of 'gati'. Yati has been classified into five types, Sama, Strotogata, Gopuchha, Mridanga and Pipilika. In sama yati, the same laya is used throughout, that is beginning to end. In strotogata, initially we use slow (vilambit) laya whereas Madhya occurs in the middle and Drut laya comes at the end. When it comes to Gopuchha, exactly inverse order of layas is put to application vis a vis strotogata meaning thereby in the later Druta, Madhya laya and Vilambit laya occurs in the first, middle and last order. In Mridanga, drut laya is used at the outset as well as at the end and Madhya laya is used amidst thereof. In Pipilika, vilambit laya occurs in the beginning, at the end while madhya laya is used in middle order, hence 'Yati' is an important aspect of tala's Das Pranas.

There is a great importance of laya in Indian Talas. Laya has been categorised basically into three types - Vilambit, Madhya and Druta. The rule of application in various forms of laya is called 'Yati'. Yati denotes application of 'gati'. Yati has been classified into five types, Sama, Strotogata, Gopuchha, Mridanga and Pipilika. In sama yati, the same laya is used throughout, that is beginning to end. In strotogata, initially we use slow (vilambit) laya whereas Madhya occurs in the middle and Drut laya comes at the end. When it comes to Gopuchha, exactly inverse order of layas is put to application vis a vis strotogata meaning thereby in the later Druta, Madhya laya and Vilambit laya occurs in the first, middle and last order. In Mridanga, drut laya is used at the outset as well as at the end and Madhya laya is used amidst thereof. In Pipilika, vilambit laya occurs in the beginning, at the end while madhya laya is used in middle order, hence 'Yati' is an important aspect of tala's Das Pranas.

Drut in the beginning and end, and Madhya laya in the middle is:

1. Sama

The Indian Government is already participating in global efforts through a number of programmes. For example, India's National Auto-fuel Policy mandates cleaner fuels for vehicles. The energy Conservation Act, passed in 2001, outlines initiative to improve energy efficiency. Similarly, the Electricity Act of 2003 encourages the use of renewable energy. Recent trends in importing natural gas and encouraging the adoption of clean coal technologies show that India has been making real efforts. the Government is also keen to launch a National Mission on Biodiesel, using about 11 million hectares of land to produce biodiesel by 2011-2012. India ratified the Paris Climate Agreement on 2 October 2016. And India has one of the largest renewable energy programmes in the world.

A review of the implementation of the agreements at the Earth Summit in Rio was undertaken by India in 1997.

Neither does it seem fair to impose restrictions on India when the country's rise in per capita carbon emissions by 2030 is likely to still represent less than half the world average of 3.8 tonnes in 2000. Indian emissions are predicted to rise from 0.9 tonnes per capita in 2000 to 1.6 tonnes per capita in 2030

Read the passage and answer the questions:

Regionalism in India is rooted in India's diversity of languages, cultures, tribes and religions. It is also encouraged by the geographical concentration of these identity workers in particular regions and fuelled by a sense of regional deprivation. Indian federalism has been a means of accommodating these regional sentiments.

After independence, initially the Indian state continued with the British-Indian arrangement, dividing India into large provinces, also called 'Presidencies'. These were large multi-ethnic and multilingual provincial states constituting the major political-administrative units of a semi-federal state called the Union of India. Languages coupled with regional and tribal identity and not religion has therefore provided the most powerful instrument for the formation of ethno-rational identity in India.

The three major factors for the formation of ethno-rational identity in India are:

1. Linguistic, tribal and religious identity
2. Linguistic, caste and tribal identity
3. Regional, linguistic and tribal identity
4. Religious, linguistic and caste identity

Read the passage and answer the following questions:

These are indicators of the process of globalisation of agriculture, or the incorporation of agriculture into the larger global market - a process that has had direct effects on farmers and rural society. For instance, in some regions such as Punjab and Karnataka, farmers enter into contracts with multinational companies (such as PepsiCo) to grow certain crops (such as tomatoes and potatoes), which the companies then buy from them for processing or export. In such 'contract farming' systems, the company identifies the crops to be grown, provides the seeds and other inputs, as well as the knowhow and often also the working capital. In return, the farmer is assured of a market because the company guarantees that it will purchase the produce at a predetermined fixed price. Contract farming is very common now in the production of specialised items such as cut flowers, fruits such as grapes, figs and pomegranates, cotton and oil seeds. While contract farming appears to provide financial security to farmers, it can also lead to greater insecurity as farmers become dependent on these companies for their livelihoods. Contract farming of export-oriented products such as flowers and gherkins also means that agricultural land is diverted from food grain production. Contract farming has sociological significance in that it disengages many people from the production process and makes their own indigenous knowledge of agriculture irrelevant. In addition, contract farming caters primarily to the production of elite items, and because it usually requires high doses of fertilisers and pesticides, it is often not ecologically sustainable.

Contract farming happens for:

1. Cash crops only

4. Food processing industry
