| Passage       | <p>Read the given passage carefully and answer the questions that follow:</p> <p>The hotspot of the earliest experiments in agriculture in South Asia is a village today called Mehrgarh, located at the foot of the Bolan Pass in Balochistan in modern-day Pakistan. The site was inhabited for a period of about 4400 years between, roughly, 7000 BCE and 2600 BCE. At its peak, it covered an area of about 200 hectares, which would make it one of the largest habitations of the period between the Indus and the Mediterranean.</p> <p>Mehrgarh was discovered as a historical site in 1976 by a French archaeological mission working in collaboration with Pakistan's department of archaeology, and it dramatically changed our understanding of how agriculture began and spread across South Asia. Mehrgarh laid the foundations for the Harappan Civilization that was to follow. The excavated mound at Mehrgarh had cultural deposits (material remains that had been used, made or changed by humans) that were nine metres thick, covering the period from around 7000 BCE. When people live in a settlement for hundreds or thousands of years, the accumulated refuse and debris—especially bricks—cause the ground level to rise, forming mounds. The thickness of the deposits, therefore, can be a rough indication of how long a settlement was occupied, in comparison with other sites in similar circumstances.</p> <p>At the bottom-most layer, the researchers found small, rectangular, multiroomed mud-brick houses, some of which may have been used for storage; sickles made of microliths attached originally to wooden handles that may have been used for harvesting grains; remains of barley and wheat grains in the soil and in the mud bricks; remains of meals, suggesting consumption of hunted animals such as gazelle, nilgai, blackbuck, wild pig and water buffalo; and evidence of domestication of the local humped cattle, zebu (<i>Bos indicus</i>), and perhaps goat as well.</p> |
| Question      | <p>The given passage details the excavation of a mound in a village today called Mehrgarh. From the given options, identify the one that best describe a mound.</p> <div><div>1. remains of dead animals found buried underground</div><div>2. waste matter from farm animals</div><div>3. a large pile of earth and stones</div><div>4. black residue and dust from iron ore</div></div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Passage       | <p>Read the given passage carefully and answer the questions that follow:</p> <p>The hotspot of the earliest experiments in agriculture in South Asia is a village today called Mehrgarh, located at the foot of the Bolan Pass in Balochistan in modern-day Pakistan. The site was inhabited for a period of about 4400 years between, roughly, 7000 BCE and 2600 BCE. At its peak, it covered an area of about 200 hectares, which would make it one of the largest habitations of the period between the Indus and the Mediterranean.</p> <p>Mehrgarh was discovered as a historical site in 1976 by a French archaeological mission working in collaboration with Pakistan's department of archaeology, and it dramatically changed our understanding of how agriculture began and spread across South Asia. Mehrgarh laid the foundations for the Harappan Civilization that was to follow. The excavated mound at Mehrgarh had cultural deposits (material remains that had been used, made or changed by humans) that were nine metres thick, covering the period from around 7000 BCE. When people live in a settlement for hundreds or thousands of years, the accumulated refuse and debris—especially bricks—cause the ground level to rise, forming mounds. The thickness of the deposits, therefore, can be a rough indication of how long a settlement was occupied, in comparison with other sites in similar circumstances.</p> <p>At the bottom-most layer, the researchers found small, rectangular, multiroomed mud-brick houses, some of which may have been used for storage; sickles made of microliths attached originally to wooden handles that may have been used for harvesting grains; remains of barley and wheat grains in the soil and in the mud bricks; remains of meals, suggesting consumption of hunted animals such as gazelle, nilgai, blackbuck, wild pig and water buffalo; and evidence of domestication of the local humped cattle, zebu (<i>Bos indicus</i>), and perhaps goat as well.</p> <p>According to the given passage, why was the discovery of the historical site in</p> |

According to the given passage, why was the discovery of the historical site in 1976 important?

1. It helped archaeologists determine that Harappan Civilization was not the only civilization in Ancient South Asia.
2. It changed the understanding of the genesis and spread of agriculture in South Asia.
3. It helped archaeologists conclude that people lived in cement houses since 7000 BCE.
4. It changed our understanding of how humans socialized and exchanged resources in ancient times.

Question ID 12960

Question Type MCQ

Read the given passage carefully and answer the questions that follow:

The hotspot of the earliest experiments in agriculture in South Asia is a village today called Mehrgarh, located at the foot of the Bolan Pass in Balochistan in modern-day Pakistan. The site was inhabited for a period of about 4400 years between, roughly, 7000 BCE and 2600 BCE. At its peak, it covered an area of about 200 hectares, which would make it one of the largest habitations of the period between the Indus and the Mediterranean.

Mehrgarh was discovered as a historical site in 1976 by a French archaeological mission working in collaboration with Pakistan's department of archaeology, and it dramatically changed our understanding of how agriculture began and spread across South Asia. Mehrgarh laid the foundations for the Harappan Civilization that was to follow. The excavated mound at Mehrgarh had cultural deposits (material remains that had been used, made or changed by humans) that were nine metres thick, covering the period from around 7000 BCE. When people live in a settlement for hundreds or thousands of years, the accumulated refuse and debris—especially bricks—cause the ground level to rise, forming mounds. The thickness of the deposits, therefore, can be a rough indication of how long a settlement was occupied, in comparison with other sites in similar circumstances.

At the bottom-most layer, the researchers found small, rectangular, multiroomed mud-brick houses, some of which may have been used for storage; sickles made of microliths attached originally to wooden handles that may have been used for harvesting grains; remains of barley and wheat grains in the soil and in the mud bricks; remains of meals, suggesting consumption of hunted animals such as gazelle, nilgai, blackbuck, wild pig and water buffalo; and evidence of domestication of the local humped cattle, zebu (*Bos indicus*), and perhaps goat as well.

According to the given passage, what does the thickness of the deposits indicate?

1. the duration the site was inhabited for
2. the cause of the destruction of the settlement
3. the fertility of the landmass
4. the details of the mineral composition of the mound

Question Type MCQ

Read the given passage carefully and answer the questions that follow:

The hotspot of the earliest experiments in agriculture in South Asia is a village today called Mehrgarh, located at the foot of the Bolan Pass in Balochistan in modern-day Pakistan. The site was inhabited for a period of about 4400 years between, roughly, 7000 BCE and 2600 BCE. At its peak, it covered an area of about 200 hectares, which would make it one of the largest habitations of the period between the Indus and the Mediterranean.

Mehrgarh was discovered as a historical site in 1976 by a French archaeological mission working in collaboration with Pakistan's department of archaeology, and it dramatically changed our understanding of how agriculture began and spread across South Asia. Mehrgarh laid the foundations for the Harappan Civilization that was to follow. The excavated mound at Mehrgarh had cultural deposits (material remains

| Passage  | <p>that had been used, made or changed by humans) that were nine metres thick, covering the period from around 7000 BCE. When people live in a settlement for hundreds or thousands of years, the accumulated refuse and debris—especially bricks—cause the ground level to rise, forming mounds. The thickness of the deposits, therefore, can be a rough indication of how long a settlement was occupied, in comparison with other sites in similar circumstances.</p> <p>At the bottom-most layer, the researchers found small, rectangular, multiroomed mud-brick houses, some of which may have been used for storage; sickles made of microliths attached originally to wooden handles that may have been used for harvesting grains; remains of barley and wheat grains in the soil and in the mud bricks; remains of meals, suggesting consumption of hunted animals such as gazelle, nilgai, blackbuck, wild pig and water buffalo; and evidence of domestication of the local humped cattle, zebu (<i>Bos indicus</i>), and perhaps goat as well.</p> |  |
| Question | <p>Choose the option that correctly indicates a piece of evidence that was not found at the bottom-most layer of the mound.</p> <ol style="list-style-type: none"><li>1. domestication of the animals such as nilgai and wild pig</li><li>2. mud-brick houses possibly used for storage</li><li>3. sickles with wooden handles used for harvesting grains</li><li>4. remains of meals that indicate hunting of animals such as gazelle and water buffalo</li></ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |

| Question      | <p>Rearrange the following sentences in the correct sequence to form a meaningful and coherent paragraph:</p> <p>A. So, the movie theatre experience has now morphed into different forms.<br/>B. Movie theatres survived the arrival of television in the 1940s.<br/>C. Therefore, today, there has been a re-direction of entertainment from the public sphere towards the domestic space.<br/>D. They survived yet again when VHS tapes were introduced in the 1980s.<br/>E. This morphing has largely been caused by urban migration, the expansion of capital, and increased consumerism in society since the 1970s.</p> <p>Choose the <b>correct</b> answer from the options given below:</p> <p>1. D-E-B-A-C<br/>2. B-D-A-E-C<br/>3. C-A-B-D-E<br/>4. B-E-C-A-D</p> |
| Options       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
